SpringBoot添加使用jsp的功能

```
o.s.w.s.r.ResourceHttpRequestHandler      : Path with "WEB-INF" or "META-INF": [WEB-INF/jsp/index.jsp]
o.s.w.s.r.ResourceHttpRequestHandler      : Path with "WEB-INF" or "META-INF": [WEB-INF/jsp/index.jsp]
```

```
boot_dao [boot_crud]  D:\CodeProjec
  .idea
  .mvn
  src
    main
      java
      resources
      webapp
        WEB-INF
          jsp
            errorPage.jsp
            listCategory.jsp
    test
  target
```

springboot项目没有webapp文件夹，需自己添加

```xml
<!-- servlet依赖-->
<dependency>
    <groupId>javax.servlet</groupId>
    <artifactId>javax.servlet-api</artifactId>
</dependency>

<!--spring boot默认不使用jsp,需要在pom中引用jsp的编译程序-->
<dependency>
    <groupId>org.apache.tomcat.embed</groupId>
    <artifactId>tomcat-embed-jasper</artifactId>
    <scope>provided</scope>
</dependency>

<!-- jstl -->
<dependency>
    <groupId>javax.servlet</groupId>
    <artifactId>jstl</artifactId>
</dependency>
```
